Professional Summary

Senior Cloud Engineer with **15+ years in IT** and **9+ years designing and operating production-grade Azure platforms** for enterprise clients. Most recent work directly relevant to a data studio: **GitOps self-service Azure Databricks platform at Volvo Cars** plus Kubeflow on Rancher Kubernetes and dual-cloud benchmarking rigs for ML. Senior technical voice in cross-functional consulting engagements at Stena Metall (~100-subscription Azure CAF estate) and Deutsche Telekom (15-month 5G BSS commercial pilot, German enterprise client). Stockholm-based today, fully open to relocating to Berlin.

Core Skills

Microsoft Azure — CAF Enterprise Scale / Landing Zones (~100-subscription estate), Virtual Machines, AKS, App Services, Entra ID + RBAC (custom role definitions), Key Vault, Storage (Blob, ADLS), Networking (VNet, NSG, Private Endpoints), Azure Monitor, Log Analytics / KQL, Azure Resource Graph, Azure Policy, Azure Backup.

Infrastructure as Code — Terraform (AzureRM, AWS, OpenStack, Databricks providers), reusable module libraries, archetype-driven CAF deployment, ARM templates.

CI/CD — Azure DevOps Pipelines, GitHub Actions, GitLab CI, Jenkins, ArgoCD, Gerrit; reusable workflow templates, two-stage `validate-on-PR` / `apply-on-merge` contracts.

Containers & orchestration — AKS, EKS, Rancher RKE, K3s; Docker, Helm, Kubeflow.

Cloud security & governance — Custom Azure RBAC, Key Vault compliance auditing, Service Principal lifecycle (Logic Apps + Microsoft Graph), SAML 2.0 federation, separation-of-duties controls.

Scripting — Python, PowerShell, Bash.

Observability — Azure Monitor, Application Insights, Log Analytics / KQL, Prometheus, Grafana, ELK Stack.

FinOps — Subscription budget automation, cost-allocation tagging, idle-cluster elimination, Hybrid Benefit, published Azure cost-optimisation Terraform templates.

Data platform adjacency — Azure Databricks (self-service GitOps), Kubeflow on Rancher RKE, dual-cloud Terraform rigs for MLCommons-style benchmarking.

Other — AWS (EC2, S3, EKS, IAM, ECR, KMS, ALB), OpenStack (DT 5G commercial pilot).

Professional Experience

DevOps Engineer — AFRY Digital Solutions AB

May 2025 – Present | Stockholm, Sweden

Assignment: Ericsson AB — CI Engineer, Tiger Test Tools (Sep 2025 – Present)

- Maintain end-to-end **CI flow for radio-communication smoke and regression testing** — Git, Gerrit, Jenkins, Docker, Linux.

Internal platform engineering (public on GitHub)

- Designed and operate a **GitOps Kubernetes reference platform**: K3s + ArgoCD + Prometheus + Grafana + cert-manager + sealed-secrets.

Cloud Engineer — Stena Metall AB

Aug 2024 – Jan 2025 | Gothenburg, Sweden

Cloud Infrastructure Engineer on the central Cloud Office (Governance) of a mature **Azure CAF Enterprise Scale** estate — **~100 subscriptions, multi-management-group hierarchy**, production workloads for a multi-billion-SEK industrial group. All infrastructure delivered as **Terraform via Azure DevOps pipelines**.

- Collaborated with **architecture leadership** on a tenant-wide **Key Vault compliance audit** — KQL across Azure Resource Graph for soft-delete retention, purge protection, and RBAC authorisation.
- **Authored two custom Azure RBAC role definitions** enforcing separation-of-duties between resource management and backup deletion (a ransomware-resilience control missing from Azure's built-in Contributor). Wired into the CAF archetype framework and shipped through the production pipeline. **38 commits across the core-governance repo.**
- Built **Service Principal lifecycle tooling** integrating Azure Resource Graph (KQL audit), PowerShell (expiring-credential inventory), and a Logic Apps + Microsoft Graph `addPassword` rotation design.
- PowerShell tooling: subscription budget automation, ACR token expiry inventory, .NET runtime enumeration across App Services, Hybrid Benefit enablement.
- **KQL-based monitoring contributed to a ~20% reduction in downtime** across supported services.
- Public sister repos: `iac-azure-core-governance`, reusable Terraform module library, Azure cost-optimisation templates.

Senior Software Engineer (DevOps) — Capgemini Sverige AB

Sep 2021 – Jul 2024 | Gothenburg, Sweden

Assignment: Volvo Cars — Car Safety R&D (Abakus MLOps / AI Platform)

- Designed and owned a **GitOps self-service pattern for Azure Databricks** for Car Safety data scientists (GitHub issue → manifest PR → GitHub Actions → `terraform apply`) with governance and cost defaults — auto-termination, autoscale, single-user mode — baked into the Terraform

module. **Outcome:** provisioning lead time fell from days to same-day; every cluster traceable to a PR and named owner; idle-cluster spend eliminated.
- Modernised a ~36-node CAE/HPC cluster: SLES → Ubuntu LTS migration, **Rancher-managed Kubernetes (RKE)** stand-up, **Kubeflow** via Helm; production ELK stack with X-Pack security.
- Built **two matched Terraform stacks** (AWS + Azure) as identically-shaped test rigs for MLCommons-style ML object-storage benchmarking.

Senior Business Consultant (DevOps) — Tech Mahindra

Feb 2017 – Sep 2021 | Bangalore, India · Sydney, Australia

Assignment: Deutsche Telekom — 5G BSS Slicing Pilot on OpenStack (15 months, Apr 2020 – Jul 2021)

- Owned the **DevOps platform side** of DT's 5G Network Slicing commercial pilot on **PAN-NET (OpenStack)**, delivering Blue Marble's ~30-microservice BSS suite plus the Phenom UI.
- **Terraform against the OpenStack provider** provisioning the Jenkins / Nexus / Tuleap / Rancher / Keycloak / ELK estate; **Ansible playbooks** for all service configuration.
- **~46 Jenkins jobs** building BMP microservices, tagging build number + short git SHA, pushing to Nexus, updating Kubernetes manifests, triggering Rancher rolling updates.
- Built a **Logstash pipeline** ingesting 5G UDR feeds into Elasticsearch for the billing emulator. Authored operational SOPs and architectural documentation used by DT and Tech Mahindra teams across multiple European regions.

Other Tech Mahindra assignments

- **Cisco Systems — CD 2.0 on AWS:** authored the Terraform for Cisco's CD 2.0 continuous-delivery platform (VPC, EKS, IAM, Jenkins, ECR, ALB) and the AWS observability stack; closed out a long-running SVN-to-Git migration via Python automation against the Bitbucket REST API.
- **Greenstone Financial Services & CA ANZ:** DevOps transformation for .NET microservices on Azure DevOps + Terraform + ACR; architected GitLab-based CI and source-control model.

Senior AEM Administrator (Cloud) — ICF Next

Sep 2015 – Jan 2017 | Bangalore, India

Built and operated a production AEM web platform on AWS for Channel 7 (national Australian broadcaster) — VPC, EC2 lifecycle, Apache HTTPD + Dispatcher hardening, **SAML 2.0 federation (Azure AD / ADFS → AWS IAM)** replacing long-lived IAM keys; Ansible roles for AEM, Apache, SSL, and base OS.

Unix / Linux Systems Administrator — HP Enterprise Services

Nov 2011 – Aug 2015 | Bangalore, India

Three-and-a-half years on HP's Global Operations Center (Unix Service Delivery Unit), rotating across enterprise outsourcing customers including **E.ON (multi-site German / UK operations)** — 24×7 incident handling, storage, DNS, console management, SOP authoring on customer-critical Unix/Linux estates.

Education

B.Tech in Computer Science — West Bengal University of Technology, Kolkata, India (2005 – 2009)

Certifications

- **Microsoft Certified: Azure Fundamentals (AZ-900)** — Mar 2023 *(801D970BAA49297)*
- **AWS Certified Solutions Architect – Associate (SAA-C03)** — *in progress*

Languages

- **English** — Fluent (working language)
- **Swedish** — SFI C-level (basic professional)
- **Hindi**, **Bengali** — Native
