Professional Summary

Platform Engineer with 15+ years of overall IT experience, including 9+ years in cloud and platform engineering across Azure, AWS, and hybrid and private cloud environments. Experienced in building and operating internal platforms that improve developer workflows through Infrastructure as Code, reusable CI/CD, scripting, automation, observability, and platform standardization. Hands-on background in Terraform, GitLab, GitHub Actions, Azure DevOps, Jenkins, ArgoCD, Python, Bash, Kubernetes, Prometheus, Grafana, KQL, and ELK, with a strong focus on reliability, developer enablement, and reducing friction in day-to-day engineering workflows.

Core Skills

- **Platform Engineering**: developer tooling, workflow automation, self-service infrastructure, Kubernetes, Docker, GitOps, ArgoCD
- **Cloud Platforms & Architecture**: Azure, AWS, hybrid and private cloud environments, landing zones, governance, IAM
- **Infrastructure as Code**: Terraform, reusable module libraries, ARM templates, infrastructure standardization
- **CI/CD & Delivery**: GitLab, GitHub Actions, Azure DevOps, Jenkins, ArgoCD, build and release automation, automated developer workflows
- **Security & Compliance**: Entra ID, RBAC, Azure Policy, least-privilege access, policy guardrails, secrets-aware platform patterns
- **Observability & Reliability**: Prometheus, Grafana, Azure Monitor, KQL, ELK, monitoring and operational visibility
- **Cost & Governance**: cloud cost optimization templates, governance controls, policy-driven infrastructure
- **Scripting & Tooling**: Python, Bash, PowerShell, Ansible
- **Collaboration**: requirement analysis, platform standardization, stakeholder alignment, troubleshooting, cross-team enablement

Professional Experience

DevOps Engineer – AFRY Digital Solutions AB *(May 2025 – Present)*

- Designed and deployed a **GitOps-based Kubernetes platform** using **ArgoCD, Prometheus, Grafana, cert-manager, and sealed-secrets**, improving reliability, automation, and the day-to-day

developer workflow through version-controlled platform operations and reusable deployment patterns.
- Maintained the GitOps platform as a live project (GitHub repository).
- Built **RPA workflows in Power Automate** to automate data collection from **Tendsign**, supporting business process optimization.

Assignment: Ericsson AB

- Supported engineering teams by maintaining test infrastructure and CI workflows, troubleshooting issues across daily delivery and validation workflows, and reducing friction in developer support workflows.

Cloud Engineer – Stena Metall AB *(Aug 2024 – Jan 2025)*

- Contributed to the evolution of the **Azure Cloud Adoption Framework (CAF)** and landing zone setup, helping define governance, compliance, and platform guardrails for enterprise Azure usage.
- Implemented **Terraform and Azure Pipelines**-based infrastructure patterns aligned with **Azure governance** standards, enabling more consistent, reusable, and controlled platform provisioning across environments.
- Defined and implemented **Azure Policy guardrails, Entra ID and RBAC** access controls, and secure-by-design infrastructure patterns to improve platform security, compliance, and operational consistency across Azure environments.
- Improved reliability with **KQL-based monitoring**, reducing downtime by **20%**.
- Contributed to secure and reusable platform patterns that supported event-driven integrations, automated workflows, and improved operational visibility.
- Developed reusable **Azure cost optimization templates** (sanitized) for standardized cost-saving practices (GitHub repository).
- Published a **Terraform module library** (sanitized) for consistent Azure infrastructure deployment (GitHub repository).

Senior Software Engineer (DevOps) – Capgemini Sverige AB *(Sep 2021 – Jul 2024)*

Assignment: Volvo Cars Car Safety R&D

- Implemented **CI/CD pipeline automation** in **Azure DevOps**, reducing deployment times by **30%**.
- Automated **Azure Databricks cluster scaling** with **Terraform** and **GitHub Actions**, improving efficiency in data workflows and support for data-platform operations.
- Upgraded on-prem hardware for **Kubeflow** workloads, integrating with Kubernetes (Rancher RKE) to support ML-adjacent platform needs.
- Worked across engineering and stakeholder groups to align requirements, shape technical approaches, and support delivery decisions for internal platform initiatives.
- Enabled development teams through platform automation, CI/CD improvements, and reusable infrastructure patterns that simplified delivery workflows and improved operational consistency.
- Led the **AI-powered Resume Builder Agent** project (sanitized version GitHub repository), strengthening workflow automation capabilities.
- Maintained a **Python-based automation toolkit** for infrastructure and operational tasks, strengthening scripting, command-line tooling, and workflow automation capabilities (GitHub repository).

Senior Business Consultant (DevOps) – Tech Mahindra *(Feb 2017 – Sep 2021)*

Assignment: Deutsche Telekom

- Designed and managed **CI/CD pipelines** using **Jenkins** and **Azure DevOps** for hybrid cloud applications.
- Automated **microservice orchestration** with **Docker** and **Kubernetes**, improving resource utilization by **25%**.
- Managed the **ELK Stack** for centralized logging and data indexing.
- Reduced operational overhead by **20%** via **Terraform** and **Ansible**-based infrastructure automation.
- Published a **sanitized OpenStack DevOps solution** (sanitized) showcasing provisioning, monitoring, and automation (GitHub repository).

Assignment: CA ANZ

- Architected and guided adoption of a **GitLab**-based CI and source control model, establishing a revised **GitFlow** branching strategy, standardizing repository and pipeline practices, and supporting team-wide implementation through documentation and knowledge transfer.

Assignment: Cisco Systems

- Supported AWS-hosted networking and firmware platforms across Development, Staging, and Production environments, contributing to reliable and scalable application operations.
- Designed and implemented AWS-based CI/CD workflows using **EC2**, Jenkins, Maven, Git, SonarQube, and an in-house orchestration tool to improve delivery automation and platform consistency.
- Built and operated containerized microservices with Docker and **Amazon ECS**, contributing to scalable distributed application deployment patterns.
- Strengthened platform observability through **Amazon CloudWatch**, ELK Stack, and Graylog, improving operational visibility and issue resolution.

Senior AEM Administrator (Cloud) – ICF Next *(Sep 2015 – Jan 2017)*

- Managed AWS and VMware environments, improving uptime by **15%** through optimized resource utilization and automated operations using **Ansible** and shell scripting.
- Provisioned and optimized AWS infrastructure using **VPCs, security groups, and EC2**, supporting scalable and secure application environments.

Unix/Linux Systems Administrator – Hewlett Packard Enterprise *(Nov 2011 – Aug 2015)*

- Administered Unix-based and VMware platforms, enhancing system performance and reliability.
- Authored **SOPs and UML diagrams**, reducing incident response times by **20%**.

Education

- **B.Tech in Computer Science** – West Bengal University of Technology, Kolkata, India (2005 – 2009)

Certifications

- **Microsoft Certified: Azure Fundamentals** (Issued March 2023)
  Credential ID: 801D970BAA49297

Languages

- English: Bilingual / Native Proficiency
- Swedish: SFI C Level Proficiency
