Professional Summary

Platform Engineer with 15+ years of overall IT experience, including 9+ years in cloud and platform engineering across Azure, AWS, and hybrid and private cloud environments. Experienced in building and operating internal platforms that improve developer workflows through Infrastructure as Code, reusable CI/CD, scripting, automation, observability, and platform standardization. Hands-on background in Terraform, GitHub Actions, Azure DevOps, Jenkins, ArgoCD, Python, Bash, Kubernetes, Prometheus, Grafana, KQL, and ELK, with a strong focus on platform reliability, observability, incident support, and reducing friction in day-to-day engineering workflows. Strong at partnering with engineering teams to turn reliability and infrastructure pain points into practical platform improvements, reusable abstractions, and better operational clarity.

Core Skills

- **Platform Engineering**: internal developer platforms, shared infrastructure abstractions, workflow automation, self-service infrastructure, Kubernetes, Docker, GitOps, ArgoCD
- **Reliability & SRE Practices**: observability, alerting, incident response, fault tolerance, operational support, post-incident learning
- **Cloud Platforms & Architecture**: Azure, AWS, hybrid and private cloud environments, landing zones, governance, IAM
- **Infrastructure as Code**: Terraform, reusable module libraries, ARM templates, infrastructure standardization, everything-as-code mindset
- **CI/CD & Delivery**: GitLab, GitHub Actions, Azure DevOps, Jenkins, ArgoCD, build and release automation, automated developer workflows, platform delivery workflows
- **Security & Compliance**: Entra ID, RBAC, Azure Policy, least-privilege access, policy guardrails, secrets-aware platform patterns
- **Observability & Reliability**: Prometheus, Grafana, Azure Monitor, KQL, ELK, monitoring, logging, alerting, and operational visibility
- **Cost & Governance**: cloud cost optimization templates, governance controls, policy-driven infrastructure
- **Scripting & Tooling**: Python, Bash, PowerShell, Ansible
- **Collaboration**: requirement analysis, platform standardization, stakeholder alignment, troubleshooting, cross-team enablement, documentation, knowledge sharing, support-oriented communication

Professional Experience

DevOps Engineer – AFRY Digital Solutions AB *(May 2025 – Present)*

- Designed and deployed a **GitOps-based Kubernetes platform** using **ArgoCD, Prometheus, Grafana, cert-manager, and sealed-secrets**, improving reliability, automation, and the day-to-day developer workflow through version-controlled platform operations and reusable deployment patterns.
- Treated the platform as an internal product by improving usability, repeatability, and operational clarity for developer-facing workflows.
- Helped shape platform quality through a strong focus on maintainability, operational simplicity, and clear engineering patterns for reuse.
- Strengthened platform observability and operational readiness for shared engineering workflows through proactive monitoring and clearer operational patterns.
- Maintained the GitOps platform as a live project (GitHub repository).
- Built **RPA workflows in Power Automate** to automate data collection from **Tendsign**, supporting business process optimization.
- Maintained automation-oriented tooling and workflows that reduced manual steps and improved consistency for recurring engineering tasks.

Assignment: Ericsson AB

- Supported engineering teams by maintaining test infrastructure and CI workflows, troubleshooting issues across daily delivery and validation workflows, and reducing friction in developer support workflows.
- Worked closely with engineering stakeholders to improve delivery continuity and day-to-day operability of internal engineering platforms.
- Supported engineering effectiveness through practical collaboration, clear communication, and hands-on problem solving across shared delivery workflows and support channels.
- Contributed to incident handling and operational stability by troubleshooting infrastructure and workflow issues affecting engineering teams.

Cloud Engineer – Stena Metall AB *(Aug 2024 – Jan 2025)*

- Contributed to the evolution of the **Azure Cloud Adoption Framework (CAF)** and landing zone setup, helping define governance, compliance, and platform guardrails for enterprise Azure usage.
- Implemented **Terraform and Azure Pipelines**-based infrastructure patterns aligned with **Azure governance** standards, enabling more consistent, reusable, and controlled platform provisioning across environments.
- Defined and implemented **Azure Policy guardrails, Entra ID and RBAC** access controls, and secure-by-design infrastructure patterns to improve platform security, compliance, and operational consistency across Azure environments.
- Improved reliability with **KQL-based monitoring**, reducing downtime by **20%**.
- Contributed to secure and reusable platform patterns that supported event-driven integrations, automated workflows, and improved operational visibility.
- Published reusable platform building blocks that supported more standardized self-service provisioning and platform adoption by engineering teams.
- Improved platform usability for engineering teams by standardizing provisioning patterns and reducing operational ambiguity in repeatable workflows.

- Improved observability and operational clarity for Azure-hosted services, helping teams identify issues faster and operate infrastructure more reliably.
- Developed reusable **Azure cost optimization templates** (sanitized) for standardized cost-saving practices (GitHub repository).
- Published a **Terraform module library** (sanitized) for consistent Azure infrastructure deployment (GitHub repository).

Senior Software Engineer (DevOps) – Capgemini Sverige AB *(Sep 2021 – Jul 2024)*

Assignment: Volvo Cars Car Safety R&D

- Implemented **CI/CD pipeline automation** in **Azure DevOps**, reducing deployment times by **30%**.
- Automated **Azure Databricks cluster scaling** with **Terraform** and **GitHub Actions**, improving efficiency in data workflows and support for data-platform operations.
- Upgraded on-prem hardware for **Kubeflow** workloads, integrating with Kubernetes (Rancher RKE) to support ML-adjacent platform needs.
- Worked across engineering and stakeholder groups to align requirements, shape technical approaches, and support delivery decisions for internal platform initiatives.
- Enabled development teams through platform automation, CI/CD improvements, and reusable infrastructure patterns that simplified delivery workflows and improved operational consistency.
- Strengthened internal platform capabilities by improving developer-facing workflows, automation paths, and operational support for engineering teams.
- Contributed technical leadership through platform-focused collaboration, knowledge sharing, and pragmatic improvement of engineering workflows.
- Supported reliability-focused platform work through automation, observability improvements, and closer alignment between engineering teams and shared infrastructure.
- Led the **AI-powered Resume Builder Agent** project (sanitized version GitHub repository), strengthening workflow automation capabilities.
- Maintained a **Python-based automation toolkit** for infrastructure and operational tasks, strengthening scripting, command-line tooling, and workflow automation capabilities (GitHub repository).

Senior Business Consultant (DevOps) – Tech Mahindra *(Feb 2017 – Sep 2021)*

Assignment: Deutsche Telekom

- Designed and managed **CI/CD pipelines** using **Jenkins** and **Azure DevOps** for hybrid cloud applications.
- Automated **microservice orchestration** with **Docker** and **Kubernetes**, improving resource utilization by **25%**.
- Managed the **ELK Stack** for centralized logging and data indexing.
- Reduced operational overhead by **20%** via **Terraform** and **Ansible**-based infrastructure automation.
- Contributed to shared engineering platform reliability through standardized automation, container platform support, and improved observability.
- Supported platform stability in hybrid environments by improving monitoring, troubleshooting, and operational consistency for shared services.
- Published a **sanitized OpenStack DevOps solution** (sanitized) showcasing provisioning, monitoring, and automation (GitHub repository).

Assignment: CA ANZ

- Architected and guided adoption of a **GitLab**-based CI and source control model, establishing a revised **GitFlow** branching strategy, standardizing repository and pipeline practices, and supporting team-wide implementation through documentation and knowledge transfer.
- Helped improve developer workflows by standardizing source control and CI usage patterns, reducing friction in day-to-day engineering processes.

Assignment: Cisco Systems

- Supported AWS-hosted networking and firmware platforms across Development, Staging, and Production environments, contributing to reliable and scalable application operations.
- Designed and implemented AWS-based CI/CD workflows using **EC2**, Jenkins, Maven, Git, SonarQube, and an in-house orchestration tool to improve delivery automation and platform consistency.
- Built and operated containerized microservices with Docker and **Amazon ECS**, contributing to scalable distributed application deployment patterns.
- Strengthened platform observability through **Amazon CloudWatch**, ELK Stack, and Graylog, improving operational visibility and issue resolution.

Senior AEM Administrator (Cloud) – ICF Next *(Sep 2015 – Jan 2017)*

- Managed AWS and VMware environments, improving uptime by **15%** through optimized resource utilization and automated operations using **Ansible** and shell scripting.
- Provisioned and optimized AWS infrastructure using **VPCs, security groups, and EC2**, supporting scalable and secure application environments.

Unix/Linux Systems Administrator – Hewlett Packard Enterprise *(Nov 2011 – Aug 2015)*

- Administered Unix-based and VMware platforms, enhancing system performance and reliability.
- Authored **SOPs and UML diagrams**, reducing incident response times by **20%**.

Education

- **B.Tech in Computer Science** – West Bengal University of Technology, Kolkata, India (2005 – 2009)

Certifications

- **Microsoft Certified: Azure Fundamentals** (Issued March 2023)
  Credential ID: 801D970BAA49297

Languages

- English: Bilingual / Native Proficiency
- Swedish: SFI C Level Proficiency
