Professional Summary

Senior DevOps and Infrastructure Engineer with 15+ years of IT experience, including 9+ years in cloud and platform engineering across Microsoft Azure, AWS, and hybrid environments. Experienced in modernizing CI/CD and infrastructure delivery workflows for engineering teams, with hands-on work across Azure DevOps, Jenkins, GitHub Actions, Terraform, Ansible, Kubernetes, and cloud operations. Strong background in designing, building, and improving delivery pipelines for Azure-hosted and hybrid applications, including .NET-based services, while strengthening Infrastructure as Code, automation, observability, identity and access control, and platform reliability. Based in Stockholm, Sweden, with a practical approach to translating delivery and infrastructure requirements into scalable, secure, and maintainable engineering platforms.

Core Skills

- **CI/CD & Infrastructure Delivery**: Azure DevOps, Jenkins, GitHub Actions, GitHub workflows, Git-based delivery models, pipeline optimization, release automation, delivery reliability
- **Infrastructure as Code & Automation**: Terraform, ARM templates, Ansible, PowerShell, Python, Azure CLI, reusable module libraries, infrastructure provisioning, configuration automation
- **DevOps & Platform Engineering**: scalable cloud platforms, Kubernetes, self-managed Kubernetes, developer-facing platform operations, engineering enablement
- **Azure Platform Engineering**: Azure subscriptions, resource groups, landing zones, governance, identity and access management, secure-by-design cloud environments
- **Azure Services & Platform Capabilities**: compute, networking, storage, IaaS, PaaS, Logic Apps, Azure Container Registry (ACR), Azure Storage, Azure Key Vault, Azure platform operations
- **Security, Governance & Compliance**: Entra ID, identity and access management (IAM), RBAC, Azure Policy, least-privilege access controls, governance guardrails, compliance controls, secure platform standards
- **Observability & Reliability**: Azure Monitor, Log Analytics, KQL, logging, monitoring, alerting, incident support, operational visibility
- **Containers & Platform Tooling**: Kubernetes, Rancher RKE, K3s, Docker, Docker Swarm, ArgoCD, containerized workloads, cloud-native platforms
- **Cost & Lifecycle Management**: Azure Cost Management, cost optimization templates, governance controls, lifecycle-aware platform operations
- **Collaboration & Engineering Standards**: requirement analysis, documentation, platform standardization, cross-team alignment, knowledge sharing

Professional Experience

DevOps Engineer – AFRY Digital Solutions AB *(May 2025 – Present)*

- Designed and deployed a **GitOps-based self-managed Kubernetes platform** using **K3s, ArgoCD, Prometheus, and Grafana**, enabling version-controlled infrastructure, improved observability, and more reliable platform operations for engineering workflows.
- Maintained the GitOps platform as a live project (GitHub repository).

Assignment: Ericsson AB

- Supported and maintained engineering and test infrastructure across **hardware, Linux servers, Gerrit workflows, and Jenkins-based CI pipelines**, improving reliability, delivery continuity, and day-to-day support for smoke and regression testing workflows.
- Troubleshot build, environment, and integration issues across CI and test infrastructure, helping stabilize engineering workflows in a multi-stakeholder environment.

Cloud Engineer – Stena Metall AB *(Aug 2024 – Jan 2025)*

- Contributed to the evolution of the **Azure Cloud Adoption Framework (CAF)** and landing zone setup, helping define governance, compliance, and secure platform guardrails for scalable enterprise Azure adoption.
- Implemented **Terraform**, **PowerShell**, and **Azure Pipelines** based infrastructure patterns aligned with Azure governance standards, enabling more consistent, automated, and secure platform provisioning across Azure environments.
- Managed and strengthened **Entra ID**, **RBAC**, and **Azure Policy** guardrails to improve identity governance, access control, and secure-by-design platform operations across Azure environments.
- Supported Azure platform operations across identity, storage, **Azure Key Vault**, networking services, **Logic Apps**, and platform-level configuration, contributing to secure, reliable, and cost-aware day-to-day cloud operations.
- Improved reliability and operational visibility with **Azure Monitor** and **KQL-based monitoring**, contributing to a **20% reduction in downtime**.
- Developed reusable Azure platform patterns and **Terraform module libraries** to support standardized provisioning, automation, platform consistency, and faster adoption by engineering teams (GitHub repository).
- Developed reusable **Azure cost optimization templates** (sanitized) aligned with **Azure Cost Management** to support cost governance, optimization, and reporting practices (GitHub repository).

Senior Software Engineer (DevOps) – Capgemini Sverige AB *(Sep 2021 – Jul 2024)*

Assignment: Volvo Cars Car Safety R&D

- Implemented and optimized **CI/CD pipeline automation** in **Azure DevOps**, reducing deployment times by **30%** and improving delivery reliability for engineering workflows.
- Automated **Azure Databricks cluster scaling** with **Terraform** and **GitHub Actions**, improving efficiency, operational control, repeatability, and GitHub-based workflow automation in cloud-based data workflows.
- Upgraded on-prem hardware for **Kubeflow** workloads, integrating with **self-managed Kubernetes** using **Rancher RKE**.

- Worked across engineering and stakeholder groups to align requirements, shape technical approaches, contribute to engineering standards, and support delivery decisions for internal platform initiatives.
- Enabled development teams through platform automation, CI/CD improvements, and reusable infrastructure patterns that simplified delivery workflows and improved operational consistency.
- Maintained a **DevOps Python automation toolkit** for infrastructure and operational tasks, strengthening internal tooling and workflow automation capabilities (GitHub repository).

Senior Business Consultant (DevOps) – Tech Mahindra *(Feb 2017 – Sep 2021)*

Assignment: Deutsche Telekom

- Designed and managed **CI/CD pipelines** using **Jenkins** and **Azure DevOps** for hybrid cloud applications, improving delivery consistency across distributed environments.
- Automated containerized microservice deployments with **Docker** and **Kubernetes** across non-managed cluster environments, improving resource utilization by **25%** and strengthening release reliability.
- Supported core cloud networking, load-balancing, and platform operations for distributed application environments, improving service stability and operational continuity.
- Managed the **ELK Stack** for centralized logging and observability, improving troubleshooting efficiency and operational visibility across hybrid infrastructure.
- Reduced operational overhead by **20%** through **Terraform** and **Ansible**-based infrastructure automation for provisioning and operational workflows.
- Published a **sanitized OpenStack DevOps solution** showcasing provisioning, monitoring, and automation patterns for OpenStack-based environments (GitHub repository).

Assignment: Greenstone Financial Services

- Led DevOps transformation for **.NET-based applications** and microservices using **Azure DevOps**, improving delivery automation and release consistency.
- Designed and improved **Azure DevOps CI/CD pipelines** for **.NET/C# applications** and microservices, supporting more consistent build, release, and deployment workflows.
- Provisioned and managed **Azure** infrastructure using **Terraform**, establishing Infrastructure as Code practices for repeatable and controlled deployments.
- Containerized and orchestrated microservices using **Docker** and **Docker Swarm**, integrated with **Azure Container Registry** to streamline build and deployment workflows.
- Improved operational visibility using **Azure Monitor** and supported artifact management through **Azure Storage**, strengthening platform observability and delivery support.
- Supported agile delivery and team enablement through **Azure DevOps** boards, documentation, knowledge sharing, and mentoring team members on DevOps practices.

Assignment: Cisco Systems

- Supported AWS-hosted networking and firmware platforms across Development, Staging, and Production environments, contributing to reliable and scalable application operations.
- Designed and implemented AWS-based CI/CD workflows using **EC2**, Jenkins, Maven, Git, SonarQube, and orchestration tooling to improve delivery automation and platform consistency.
- Built and operated containerized microservices with Docker and **Amazon ECS**, strengthening scalable distributed application deployment patterns.

- Improved observability and team capability through **Amazon CloudWatch**, ELK Stack, Graylog, and mentoring across delivery workflows.

Senior AEM Administrator (Cloud) – ICF Next *(Sep 2015 – Jan 2017)*

Assignment: Channel 7

- Managed AWS and VMware environments, improving uptime by **15%** through optimized resource utilization and automated operations with **Ansible** and shell scripting.
- Designed and maintained a production-like AWS sandbox environment for Channel 7, improving reliability of testing, validation, and release preparation.
- Provisioned and optimized AWS infrastructure using **VPCs, security groups, and EC2**, supporting scalable and secure AEM application environments.
- Improved platform security and operability through SSL configuration, infrastructure governance, and access management using AWS security best practices.
- Supported AEM author/publish environments and Apache Dispatcher integration to improve content delivery and platform stability.

Unix/Linux Systems Administrator – Hewlett Packard Enterprise *(Nov 2011 – Aug 2015)*

- Administered Unix-based and VMware platforms, enhancing system performance and reliability.
- Authored **SOPs and UML diagrams**, reducing incident response times by **20%**.

Education

- **B.Tech in Computer Science** – West Bengal University of Technology, Kolkata, India (2005 – 2009)

Certifications

- **Microsoft Certified: Azure Fundamentals** (Issued March 2023)
  Credential ID: 801D970BAA49297

Languages

- English: Bilingual / Native Proficiency
- Swedish: SFI C Level Proficiency
